Product Description

Product Description:

Used 2020 BYD Han EV

The 2022 BYD Han EV is a mid-to-large pure electric sedan that combines elegant appearance, luxurious interior, excellent performance and advanced technology. It is a leader in the field of electric vehicles.

Exterior design: Dragon-face aesthetics, showing extraordinary charm

- The front face continues BYD's classic "Dragon-face aesthetics" design concept, reducing the use of chrome trims and replacing them with black high-gloss trims, making the overall style more sporty and fashionable. The closed front face is matched with a sharp headlight group, like a giant dragon staring forward. The three LED lamp beads inside the headlights are arranged in a matrix. When lit, they are bright and highly recognizable.

- The side lines are smooth and natural, and the waistline extending from the front fender gradually weakens from beginning to end, and together with the concave doors, it outlines a strong sense of muscle. The side skirts and window lines are edged with chrome trims, and matched with hidden door handles, which not only improves the beauty of the whole vehicle, but also reduces the drag coefficient, showing the texture and luxury that a mid-to-large sedan should have.

- The rear design is ingenious, and the through-type taillight is the finishing touch. The interior adopts a staggered spiral light strip structure. When it is lit, it looks like a smart light strip, which is full of technology and Chinese characteristics. The C-shaped guide groove decoration on both sides of the rear surround and the stepped tailgate surface make the rear more three-dimensional.

Interior space: luxurious and comfortable, creating a noble experience

- The interior adopts an embracing cockpit design, and the center console has smooth lines and clear layers. The use of a large number of soft materials, leather and painted panels creates a luxurious driving atmosphere.

- In terms of seats, the seat surface adopts wavy diamond stitching, the internal filling is soft, and the riding comfort is greatly improved. Whether it is the sports seats in the front row or the spacious seats in the back row, they can provide passengers with good support and wrapping.

- The interior space is spacious, with a body size of 499519101495mm and a wheelbase of 2920mm, providing passengers with ample head and leg space. The rear space is particularly good, and even taller passengers can easily get a comfortable ride.

Power performance: powerful and efficient, enjoy driving passion

- The 2022 Han EV offers two power versions to choose from. The single-motor version has a power of 180kW (245 horsepower), a torque of 350N·m, an acceleration of 7.9 seconds per 100 kilometers, and a pure electric range of up to 715km under CLTC conditions, meeting the needs of daily urban commuting and long-distance travel. The dual-motor version has a power of up to 380kW (517 horsepower), a torque of 700N·m, and an acceleration of 100 kilometers in just 3.9 seconds. The powerful power output allows you to enjoy passion and speed during driving.

- BYD's original blade battery technology provides reliable safety protection for the vehicle, and also has a higher energy density, making the cruising range more secure.

Features:

1.Product Name: Used BYD Han DM

- Safety:
 - Comprehensive safety airbag system for passenger protection
 - Advanced safety technologies including ABS (Anti-lock Braking System), Electronic Stability Control, etc., for stable driving and braking performance
 - Reverse camera and parking assistance system for convenient parking operations

Technical Parameters:
